Cellar Doors

ALDER

- Alder is so well-known for its workable characteristics that it is often referred to as “Scottish Mahogany.” Cream-colored when freshly-cut, it often “bleeds” when on a lathe, creating its famous turning veins.
- Alder also is whimsically spotted with knots which makes for a character-filled wood piece. **We** used Knotty Alder as a standard for doors for its beauty and low price tag. Clear Alder, which displays fewer knots, is also a great choice, however, is more rare and more expensive.

MAHOGANY

- Mahogany is regarded by many as the world's finest hardwood for finished cabinetry, due to its tight, consistent grain, and superb wood-working properties.
- Mahogany is also **our** choice for finishing, as it holds both stain and lacquer beautifully.
- Okoume Mahogany (African sub-specie) is used as the standard; however other species, including African, and Genuine (Honduran) are also available upon request.
- All Mahoganies will age to either a milk or dark chocolate brown.
